

Langflow Input Schema

1) Navigating to Inputschema under API access:

 Input Schema ✕

Endpoint Name

An alternative name to run the endpoint

Expose API

Select which component fields to expose as inputs in this flow's API schema.

Chat Input

Prompt Template

Groq

Chat Output

2) Adding Endpoint name and adding temperature to the payload

 Input Schema ✕

Endpoint Name

TestCaseGenerator

Expose API

Select which component fields to expose as inputs in this flow's API schema.

Chat Input

Expose Input	Field Name	Description	Current Value
	Input Text	Message to be passed as input.	Type something...
	Store Messages	Store the message in the history.	☐
	Sender Type	Type of sender.	User

Input Schema

×

Endpoint Name

TestCaseGenerator

Expose API

Select which component fields to expose as inputs in this flow's API schema.

	Session ID	The session ID of the chat. If empty, the current session ID parameter will be used.	Type something...	
	Context ID	The context ID of the chat. Adds an extra layer to the local memory.	Type something...	
	Files	Files to be sent with the message.	Upload a file...	

Prompt Template

▼

Input Schema

×

Endpoint Name

TestCaseGenerator

Expose API

Select which component fields to expose as inputs in this flow's API schema.

	Temperature	Run inference with this temperature. Must by in the closed interval [0.0, 1.0].	0.10 Precise Creative
	N	Number of chat completions to generate for each prompt. Note that the API may not return the full n completions if duplicates are generated.	0 + -
	Model	The name of the model to use. Add your Groq API key to access additional available models.	Select an option

3) Payload after making these changes

</> API access

Input Schema (2)

×

API access requires an API key. You can [create an API key](#) in settings.

Python

JavaScript

cURL

```

8 # Request payload configuration
9 payload = {
10     "output_type": "chat",
11     "input_type": "chat",
12     "input_value": "hello world!",
13     "tweaks": {
14         "ChatInput-YLdGJ": {
15             "context_id": ""
16         },
17         "GroqModel-2UpoH": {
18             "model_name": "openai/gpt-oss-120b",
19             "temperature": 0.1
20         }
21     }
22 }

```

4) Running the Input Schema API in POSTMAN with the changes

The screenshot shows a Postman interface for a POST request to the endpoint `http://localhost:7860/api/v1/run/TestCaseGenerator`. The request body is in JSON format, containing the following structure:

```
1 {
2   "output_type": "chat",
3   "input_type": "chat",
4   "input_value": "Generate the testcases for Banking ATM Transaction functionality",
5   "tweaks": {
6     "ChatInput-YLdGJ": {
7       "context_id": "Banking ATM"
8     },
9     "GroqModel-2UpoH": {
10      "model_name": "openai/gpt-oss-120b",
11      "temperature": 0.1
12    }
13  }
14 }
```

5) Output

The screenshot shows the response of the POST request. The status is **200 OK** with a response time of 2.41 s and a size of 17.46 KB. The response body is in JSON format, containing the following structure:

```
1 {
2   "session_id": "2876765d-c57e-41aa-9242-3e8967847241",
3   "outputs": [
4     {
5       "inputs": {
6         "input_value": "Generate the testcases for Banking ATM Transaction
7           functionality"
8       },
9       "outputs": [
10        {
11          "results": {
12            "message": {
13              ...
14            }
15          }
16        }
17      ]
18    }
19  ]
20 }
```

Generated JSON Output:

```
